AVAILABLE RESOURCES:
If applicable, identify means and resources available at the sponsoring institution(s) to carry out this proposal. **The maximum length for this section is 1 page (Arial or Verdana font size 10).**

The Computer Science Department has two electronic boards (one mobile and the other fixed in a lecture room) which are available to be used in this project for the testing the applications that will be developed. The faculty has also another classroom equipped with an electronic board. They will also be very helpful while developing and testing the gestures for the interface interaction model.

The Department has also a set of 4 PDA’s, which added to the 3 more we are requesting in this project will be enough for developing and testing the systems we want to develop. The whole campus is illuminated with wireless LAN and wide-band connection to Internet, as well as videoconferencing facilities.

The faculty has a specialized library with subscription to international journals as well as access to many important academic databases including Science Direct, the ACM Digital Library and the IEEE Explore.

It is important to mention here that the Department of computer Science has an important number of undergraduate and students and the faculty attracts many of the best students from the whole country entering to the university. There is also a fair number of students in the Master of Science and Doctoral programs. These will be the students that will work and be paid by the project for their thesis work.
